

forwardWrite :HELP

User Guide

v1.0.3

ABOUT US:

We are forward s/ash Inc.

WHAT IS forwardWrite:

As a Windows native user, we always lacked protection, mostly using and keeping our text data ...

Notepad is best when we don't care our data but when it comes to security we need something simple but powerful and secured too...

So, we came-up with an idea of `forwardWrite`.

`forwardWrite` is encryption based text editor which secures each file with its separate password so that more than one user can use

same application to secure their own files independently. One of its unique features is "FORGOT PASSWORD??" which follows an algorithm to reminds you files password (Otherwise you can use MASTER PASSWORD to view the password of corresponding file).

KEY FEATURES:

- 🔄 Forgot Password??
- 🔄 Change Password
- 🔄 More Sophisticated font-chooser-dialog
- 🔄 Password Protection ON/OFF facility
- 🔄 Printer integration

**We will come-up with more sophisticated version because we care about everything that relates to your documents security, And we love to do that...

*OPEN EYED DREAM,
COMES TRUE*

(Special thanks to Mr Abhishek Verma, for not showing mercy 😊😊)
